                                                                                         Assignee

                                                                                         butlerx

F1/'?' = Help, q = Quit
```

Ctrl + N create either a new issue, comment or label, depending on the active window.

Ctrl + E and Ctrl + D behave in a similar fashion for editing and deleting comments and labels.
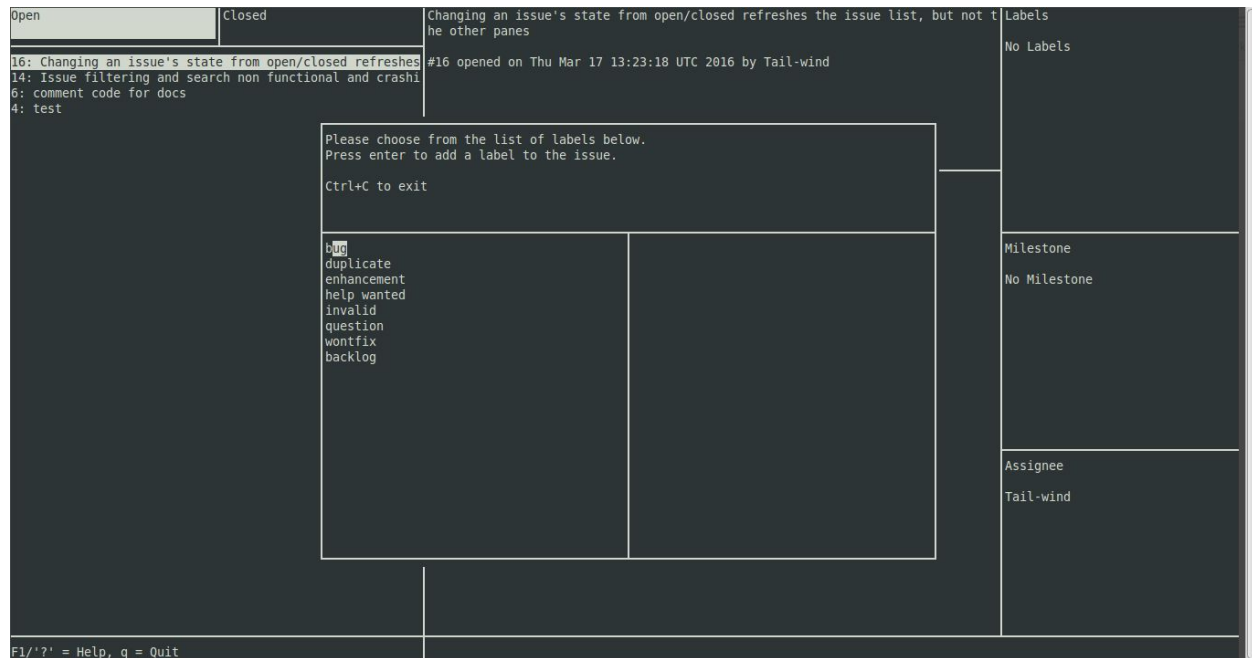

New Issue Dialog box:

```
Open                    Closed          Changing an issue's state from open/closed refreshes the issue list, but not t  Labels

New Label Dialog box:

The tab key is used to toggle between displaying open and closed issues, with the currently selected option being highlighted.

Open/Closed display:

Navigation within a window is done by either the arrow keys or with the h,j,k, and l keys. The display will automatically refresh from the remote repository every five minutes, as well as any time the user makes a change to the issues. Refreshing may also be done by pressing Ctrl + R if you want to refresh manually.
